Priority

The priority documents filed March 24, 2004 are acknowledged and have been made of record.

Information Disclosure Statement

The information disclosure statements filed March 24, 2004 and September 8, 2004 have been considered and have been made of record.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Feinstein et al (USP 4,142,036).

Feinstein et al (USP 4,142,036) discloses polyphenylcarboxylic acid adamantane compounds and polymers prepared therefrom, wherein the polymers are useful for forming shaped objects such as film, fiber and molded parts that anticipates the claimed invention. See abstract; col. 1, lines 5-10,15-35, 50-60; col. 2, lines 9-12,18-40; col. 3, lines 7-43; col. 5, lines 51-68; col. 6, lines 1-53; col. 8, lines 38-68; the claims.

Feinstein teaches the substituted adamantine nucleus when incorporated into a polymer is known to be capable of providing unique physical properties, for example because of the geometric bulk of 1,3-dimethyladamantane in its polymers results in rigidity, high thermal stability, high glass transition temperatures, low crystallinity, high

Application/Control Number: 10/807,326

Art Unit: 1711

heat distortion temperatures and good hydrolytic stability. See col. 2, lines 18-27, 28-37. The patentee states a specific object is to provide new adamantane polyphenylcarboxylic acids, to provide novel adamantane polymers such as polyamides, polyesters and polyimides made from these acid compounds. See col. 2, lines 29-39.

The patentee teaches the adamantane polyphenyl carboxylic acid compounds containing two acyl moieties can be used to produce high molecular weight condensation polymers such as polyesters and polyamides by condensing with an organic compound providing two reactive groups derived from either a polyhydric alcohol, a polyamine, etc. See col. 5, lines 51-68; col. 6, lines 1-36.

Obviousness-type Double Patenting Rejection

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970);and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-5 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7 of copending Application No. 10/807,426. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant application and the copending application S.N. 10/807,426 are claiming overlapping subject matter that is

Art Unit: 1711

viewed as not being patentably distinct. The instant application and the copending application are claiming a material for dielectric films that is a polymerizable composition comprising dissolving in an organic solvent an adamantane polycarboxylic acid derivative denoted by the formula (1), an aromatic polyamine denoted by the formula (2); a polymer that is the polymerized product of the polymerizable composition comprising the adamantane polycarboxylic acid denoted by formula (1) and the aromatic polyamine denoted by the formula (2) dissolved in an organic solvent and the dielectric film prepared from the polymer formed from an adamantane polycarboxylic acid denoted by the formula (1) and the aromatic polyamine denoted by the formula (2); wherein the dielectric film has a 5% weight loss temperature of 500°C or higher. The instant application is claiming a narrower variation, which is encompassed by the broader claimed invention of the copending application. In such an instance, it is viewed that one set of claims cannot be infringed without literally infringing the other set of claims. Therefore, an obviousness-type double patenting rejection is proper.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Inoue is cited to show the state of the art of admantane derivatives and process of preparing.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia Hightower whose telephone number is (571) 272-1073. The examiner can normally be reached on M-F from 9:30 A.M. - 6:00 P.M.

Application/Control Number: 10/807,326 Page 5

Art Unit: 1711

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on (571) 272-1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
